**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim is drawn to a process that is dependent from a claim drawn to a developer. This makes the scope of the claim confusing.
3. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: those necessary for electrostatic development such as charging a photoconductor, exposure, image formation, development, transfer, fixing, cleaning, etc.
4. Claims 17 and 18 recite the limitations "photoconductive drum" and photoconductor charging apparatus" in line 1 of each claim. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanikawa (5,364,722). Tanikawa (claims and figures) teaches an electrostatic developer that includes a similar hydrocarbon wax with the same relationship of endotherms determined by differential scanning calorimetry. Tanikawa directly suggests that the wax a has predetermined and predictable crystallinity (col. 8 lines 56-col. 9 line 6). It would have been obvious to one of ordinary skill in the art that the same crystallinity and branching would be present in the wax because of the similarities in the produced endotherms and performance of the developer as exhibited by the stability and fixability (col. 3).

7. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanikawa (5,364,722) as applied to claims 1-20 above, and further in view of Terauchi (6,733,941). Tanikawa is discussed above. In addition, Terauchi (col. 3) teaches the well known use of similar waxes with similar crystallinity that are specifically linear. It would have been obvious to one of ordinary skill in the art that the same crystallinity and branching would be present in the wax used by Tanikawa and Terauchi because of the similarities in the produced endotherms and performance of the developers as exhibited by the stability and fixability of each referenced wax used in similar developers (col. 3) with the expectation of similar beneficial results due to the wax component of the developer.
